We offer the only integrated family of wafer fabrication systems in the world.

There are four key processes that, in the end, determine the feature size, line width and materials characteristics of your products. These processes are electron-beam lithography, sputter deposi-

tion, photolithography (both scanning and stepping) and etching. As the only manufacturer of systems that address all of these areas, we are in an unusually effective position to coordinate the

parameters and processes of all four operations.

You are already seeing the benefits of this. We have made—and continue to make—dramatic strides in implementing a cost-

effective mix-and-match approach to semiconductor fabrication. This approach is available today between many of our systems. And we are actively working to implement it across our

entire equipment family.

But it is just one of the many successful efforts we are making to deliver products that meet your real-world VLSI manufacturing needs. It is no accident that Perkin-Elmer products are setting the industry standards for performance, uptime, quality and yield.

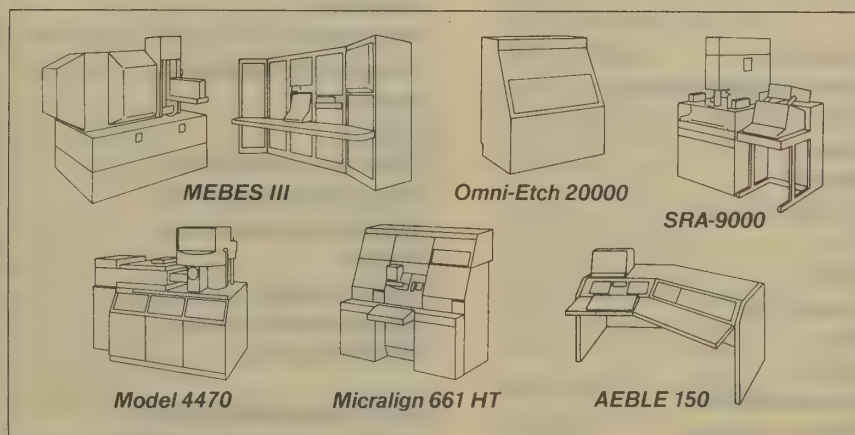

Individually, each of our systems has a clear benefit to you. Taken together, they add up to not only greater fab line efficiencies but also maximum opportunity to profit from your fab line.

And, of course, there are the additional benefits of dealing with a single source: the efficiencies of time and effort; the convenience of the

largest service organization in the business; a worldwide network of service and support offices; a broad range of training, service and maintenance programs.

To find out how Perkin-Elmer's one-source approach to wafer fabrication can make your capital investment dollars stretch further, call or write us today: Perkin-Elmer, Semiconductor Equipment Group, 761 Main Avenue, Norwalk, CT 06859-0212, (203) 834-6341.

One Source. Every critical step of the way.

Automatic Peak Power Meter 0.75-18 GHz Model 478

The new General Microwave microprocessor based Automatic Peak Power Meter characterizes pulses down to 25 Nanoseconds or less.

With the GMC unit, the pulse to be measured is digitized and presented on the built in CRT Monitor on a calibrated graph in either dB or linear power units. The peak power is always displayed as well as any instantaneous power point that the operator selects by sliding a cursor on the graph. Any time parameter of the pulse such as rise time or pulse width is read out automatically by setting a set of cursors to any points on the pulse. Operation on the IEEE-488 standard bus is a standard feature of the instrument.

Radiation Hazard Meter -RAHAM™

General Microwave RAHAM Hazard Meters detect and measure potentially hazardous electromagnetic energy radiating or leaking from rf and microwave sources, e.g. microwave ovens, medical equipment, radar installations, microwave heaters and dryers, mobile communication systems, electronic warfare systems.

Model	Polarization	Frequency Range, GHz
1	Bi-directional	0.3-18

PEARSON Wide Band, Precision CURRENT MONITOR

With a Pearson current monitor and an oscilloscope, you can measure pulse or ac currents from milliamperes to kiloamperes, in any conductor or beam of charged particles, including those at very high voltage levels.

This monitor is physically isolated from the circuit. It is a terminated current transformer whose output voltage precisely follows the current amplitude and waveshape. A typical model gives an amplitude accuracy of +1%, -0%, 20 nanosecond rise time, droop of 0.5% per millisecond, and a 3 db bandwidth of 1 Hz to 35 MHz. Other models feature 2 nanosecond rise time, or a droop as low as 1% per second.

Whether you wish to measure current in a conductor, an electron device, or a particle accelerator, it is likely that one of our off-the-shelf models (ranging from 1/2" to 10 3/4" ID) will do the job. We also provide custom designs to meet individual specifications.

Contact us and we will send you engineering data.

NOBRUSH[®] Frequency Converters & Generators

THE SIMPLEST, MOST RUGGED, MOST DEPENDABLE POWER SOURCE.

The heart of each NOBRUSH Frequency Converter is a NOBRUSH permanent magnet generator—a revolutionary development in its own right. The NOBRUSH permanent magnet generator features cast aluminum rotor designed to give amazing voltage stability. It eliminates brushes, commutators, slip rings, resulting in absolute minimum maintenance. Elimination of excitation losses gives amazingly high efficiency, with consequent low heating. Other NOBRUSH advantages are excellent wave form, and immunity to damage by repeated overload or short circuit.

NOBRUSH[®] Power Systems

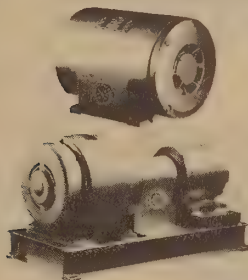

PROVIDE DISTORTION FREE POWER TO SENSITIVE ELECTRONIC SYSTEMS.

NOBRUSH Power Systems are available in a wide range of ratings from 150 Volt-Ampere up to 250 KVA (and in some instances up to 400 KVA). Synchronous/Stepping Motors & Controls

DC STEPPING: Precision permanent magnet motors for phase-switched d-c stepping with capability over 20,000 step/sec with minimum power input. Standard models with step angles of 0.72, 1.8, 2.0, 5 or 15 degrees available in accuracies to $\pm 3\%$ of 1 step noncumulative. Permanent magnet and variable reluctance models. Torque ratings to 2600 oz-in. Wide selection of both modular and packaged standard controls available with speeds to 10,000 steps/sec: dial-in indexers that adjust motion of 1 to 99,999 steps from single switch closure; translators which convert pulses to motor steps on 1:1 basis. Feature interface capability with computer logic and built-in acceleration and deceleration.

AC SYNCHRONOUS: Models available in speeds of 28.8, 72 or 200 rpm at 60 hertz. Torque ratings to 1800 oz-in. Bi-directional; start within 25ms, stop and reverse within 5 degrees of shaft rotation. Need only single-pole, 3-position switch for complete forward, reverse or "off control." Can be completely stalled without overheating and without harmful effects on components.

MODULYNX® MOTION CONTROLS. Modular design with independent I/O, indexer and driver cards that permit system design or redesign simply by interchanging circuit cards.

Precision

It's a critical word in the optical coating industry. We thrive on words like that at Liberty Mirror, and have since 1914. With capabilities like our 22 Chambers, including large substrate coating up to 10 feet in diameter or 100" x 100" square, and fabrication from laminating through polishing, we're geared for precision.

Here are a few more words we like . . .
Reliability, Experience and Service.
Liberty Mirror . . . We *know* we can help.

Looking for a specific optoisolator? Odds are we have it.

Think of "General Instrument" and what comes to mind? LED lamps and displays.

But are you aware that the LightHouse also offers the industry's broadest line of optocouplers?

We make triac drivers, photo-transistors, photodarlingtons and IC circuit output types.

And we're developing new applications-specific optoisolators. Products like our new OPTOLOGIC™ coupler that acts just like a digital IC.

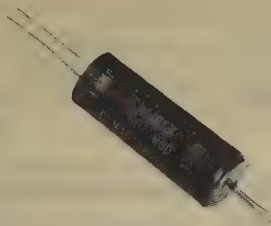

If you're looking for a particular optoisolator, we encourage you to read the fine print.

You'll find it under "Optoelectronics. General Instrument."

General Instrument Optoelectronics Division is reached at 3400 Hillview Avenue, Palo Alto, CA 94304. (415) 493-0400. TWX: 470208.

RETROREFLECTIVE & INTERRUPTER SWITCHES (SLOTTED)

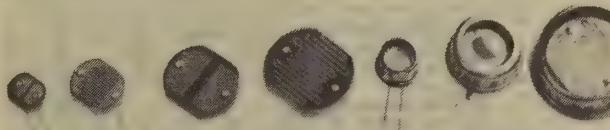

Standard and custom optical switches—infrared GaAs LED and silicon photo-transistor interrupters available in sealed housing of I-R transmitting plastic or opaque plastic with open apertures. Three retro styles: arrow, TO-18, and cubic.

60% Actual Size

PHOTOCONDUCTIVE CELLS

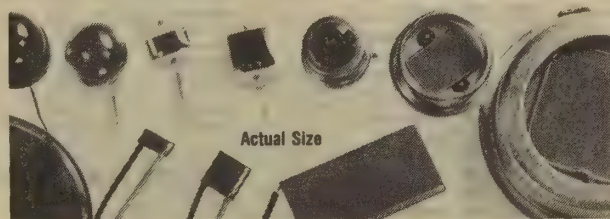

Vactec light dependent resistors (LDR's) are available in three hermetic enclosures (TO-18, TO-5, TO-8) and 4 ceramic types. Ceramic types have automatically inserted wires which insure perfect contact integrity. Six materials of CdS, CdSe and CdSe-CdS mixtures with spectral response peaks from 565-735 nm. Each material has a variety of sensitivities to satisfy all requirements.

Actual Size

SILICON PHOTOVOLTAIC CELLS

Three processes: BLUE ENHANCED, LOW CAPACITANCE, STANDARD SOLAR. All available in a variety of hermetic, ceramic, as chips, or with flying leads. The BLUE ENHANCED cells are unique large area detectors with high U-V sensitivity to as low as 200 nm. Almost non-existent U-V enhancement effect with stability equivalent to high quality photodiodes. LOW CAPACITANCE cells have fast response less than 15μs with 10KΩ load. The high shunt impedance is desirable for driving amplifiers. SOLAR cells have high V_{oc} at low illumination (typ 200mV at .05mW/cm²). Linear over wide illumination range.

Actual Size

PHOTOTRANSISTORS — LED'S — PHOTODARLINGTONS — LIGHT ACTIVATED SWITCHES (LAS)

Phototransistors and photodarlington are NPN passivated—4 chip sizes of 25, 40, 50, and 60, mil square in TO-18, ceramic, coaxial, and lateral (side looking) packages. High light current at very low drive current ideal for instrumentation applications. GaAs I-R LED's with excellent stability in TO-18, T-1, T-1½, lateral packages. LAS (light activated switches) have high sensitivity with Schmitt Trigger output. New—high power GaAlAs I-R LED's in TO-18, T-1, T-1½ packages.

Actual Size

PHOTODIODES

BLUE ENHANCED photodiodes are extremely low dark current devices with excellent response in the U-V. Less than 10pA (I_D) for small chips. Large area diodes (VTB5051) 14.8mm² active area with 1.2A/(W/cm²) at 365nm. and I_D of 250pA max. FAST photodiodes have low capacitance. Use with reverse bias for fast response time and excellent linearity. Ideal for remote I-R sensor digital controls.

Actual Size

VACTROLS

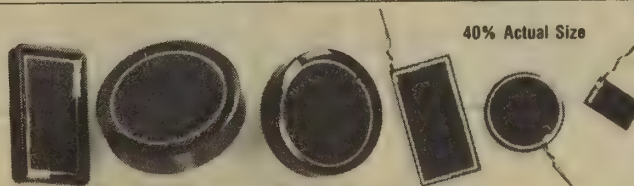

Optical couplers using LED's, neons, or incandescent lamps as the emitter and Vactec photoconductive cells (LDR's) as the detector. For noiseless switching and signal monitors for audio. Neon types to sense telephone ring. LED types for triac gate control. Incandescent types for low cost true RMS sensor as voltage regulator or control of constant wattage heater. Five package types include 2 hermetic.

Actual Size

SELENIUM PHOTOVOLTAIC CELLS

Large area detectors for direct meter drive or in conjunction with amplifier. Spectral response peaks at 575 nm and is close to visible response. Available with integral #102 filter to match standard observer curve (CIE). Available in many flat or round cells with or without leads—also in 9 package styles including 2 hermetic.

PROVEN RELIABILITY—

DC-DC, DC-AC, SOLID-STATE POWER INVERTERS

over 260,000 logged hours— voltage-regulated, frequency-controlled, for missile, telemeter, ground-support, 135°C all-silicon units available now—

Interelectronics all-silicon thyatron-like gating elements and cubic-grain toroidal magnetic components convert DC to any desired number of AC or DC outputs from 1 to 10,000 watts.

Ultra-reliable in operation (over 260,000 logged hours), no moving parts, unharmed by shorting output or reversing input polarity. High conversion efficiency (to 92%, including voltage regulation by Interelectronics patented reflex high-efficiency magnetic amplifier circuitry).

Wide input voltage range (1 to 250 volts DC). Wide input voltage regulation (output voltage maintained with variations up to 50% in input voltage).

Light weight (to 6 watts/oz.), compact (to 8 watts/cu. in.), low ripple (to 0.01 mv. p-p), excellent voltage regulation (to 0.1%), precise frequency control (to 0.2%) with Interelectronics extreme environment magnetostrictive standards or to 0.0001% with fork or piezoelectric standards.

Complies with MIL specs. for shock (100G 11 misc.), acceleration (100G 15 min.), vibration (100G 5 to 5,000 cps.), temperature (to 150 degrees C), RF noise (I-26600).

AC single and polyphase units supply sine waveform output (to 2% harmonics), will deliver up to ten times rated line current into a short circuit to actuate MIL type magnetic circuit breakers or fuses, will start gyros and motors with starting current surges up to ten times normal operating line current.

Now in use in major missiles, powering telemeter transmitters, radar beacons, electronic equipment. Single and polyphase units now power airborne and marine missile gyros, synchros, servos, magnetic amplifiers.

Interelectronics—first and most experienced in the solid-state power supply field produces its own all-silicon solid-state gating elements, all high flux density magnetic components, high temperature ultra-reliable film capacitors and components, has complete facilities and know how—has designed and delivered more working KVA than any other firm!

For complete engineering data, write Interelectronics today, or call (914) ELMwood 8-8000 in Congers, N.Y.

Elgar's "B" series UPS offer: Intelligent static switches, superb transient response, and excellent unbalanced load regulation (on three phase units) as standard features. Most single phase units are offered in 19" rack mountable or free standing enclosures.

Available from 1 kVA, single phase, to 50 kVA, three phase.

PROGRAMMABLE AC POWER SOURCES/ FREQUENCY CONVERTERS

50/60 Hz Input, 15 Hz to 10 kHz Output, 120 VA to 36 kVA

Elgar's AC Power Sources provide fixed, variable or programmable output voltage and frequencies with the largest number of single, two or three phase models available. Specifications include 25 microseconds response time, 0.4% maximum distortion and 0.1% regulation.

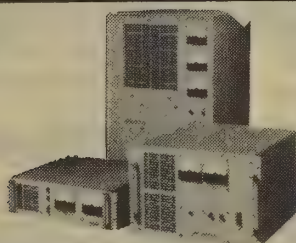

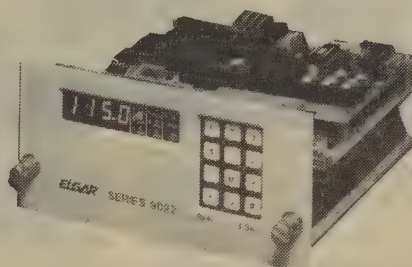

PROGRAMMABLE PLUG-IN OSCILLATORS

Digital control AC Power . . . amplitude, frequency, phase angle, MATE compatible, listener/talker.

Elgar's Plug-in Programmer (PIP series) fits all Elgar linear AC Power Sources. Offers a variety of independent programming functions, either locally through a 12 pad keyboard or remotely via IEEE 488 bus.

Standard features: Dual voltage range, $\pm 0.001\%$ frequency accuracy, 0.5° phase angle steps, AC cycle drop out 0.015% regulation. Programmable current limits, continuous self-test and output monitoring available.

ULTRA PRECISION AC LINE CONDITIONERS

High-speed (20μ SEC.) regulation, transient filtering, waveform correction.

Elgar's Ultra-Precision AC Line Conditioners solve every power line problem except complete interruptions and are available in 1 kVA, 3 kVA and 5 kVA single phase, plus 3, 9 and 15 kVA three phase models.

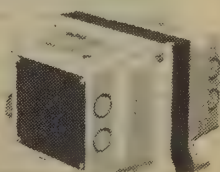

MICRO-UPS

New from Elgar - UPS designed especially for personal and small business computers.

Available in three new models, SPR 350 (350VA), SPF 550 (550VA) and SPF 1000 (800VA).

All models are desktop size providing up to 25 minutes of battery backup time.

All units include Elgar's Failsafe software.

HIGH ISOLATION TRANSFORMERS (HITS)

1 to 60 kVA models provide 146dB of common mode noise attenuation.

Elgar's HITS are lifetime guaranteed! Elgar manufactures triple shielded transformers with tightly controlled interwinding capacitance (0.0005pF) to virtually eliminate common mode line noise and other line transients. Most HITS are available from stock.

RHP SERIES

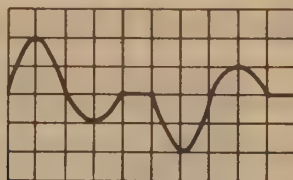

Resonant Inverter HV Power Supplies

FEATURES

- Low Stored Energy
- 0.02% Voltage Regulation
- 0.1% RMS Ripple
- Low RFI and EMI
- Arc, Short Circuit, and Reverse Voltage Protected
- Easy Parallel Operation
- Wide Range of Options

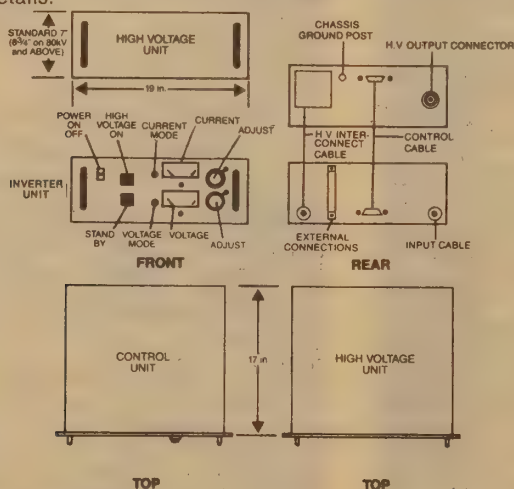

THEORY OF OPERATION

The Spellman RHP power supply is the first commercially available design to use a pure sine-wave current source produced by a series resonant circuit to generate high voltage power at switching frequencies higher than 20 kHz.

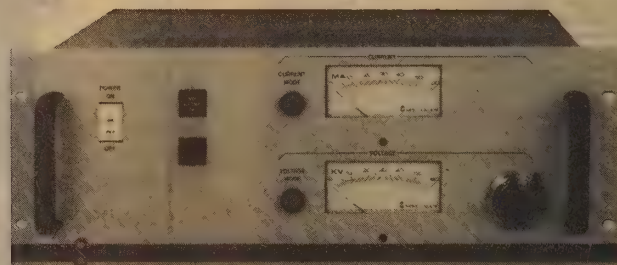

CONSTRUCTION

Two part construction is provided for all models. The high voltage chassis and inverter chassis are housed in rack mounted enclosures measuring 7" H x 19" W x 19" D. On 80 kV, 100 kV and 120 kV units, the high voltage chassis height increases to 8 3/4". Higher voltage models are also available. Consult factory for details.

SPECIFICATIONS

 Line Regulation: $\pm 0.01\%$ for $\pm 10\%$ Line Change
 Load Regulation: 0.02% for Full Load Change
 Ripple: 0.1% RMS
 Stability: 0.02% / Hr, 0.05% / 8 Hrs
 Service Condition: 0°C to +50°C Operating
 -40°C to +85°C Storage
 Metering: Single Range kV Meter
 Single Range mA Meter Both 2% Accuracy

The waveform shows the typical current in the power circuit starting and stopping at zero, which eliminates undesirable electromagnetic radiation normally associated with switching and phase control regulators. Turn on and turn off of the power switch at zero current also effectively eliminates SCR switching losses resulting in input to output efficiencies of: previously unattainable in regulated power supplies using conventional technology.

CUSTOM DESIGNS

X-RAY POWER SUPPLIES

High peak power up to 100 kW and continuous power up to 30 kW are available using resonant frequencies of 60 kHz and at repetition rates above 20 kHz. Typical applications include CT scanners, radiological equipment, x-ray lithography and industrial x-ray systems. Spellman's 30 kW CT scanner power systems includes a floating filament supply, emission control and built-in diagnostics.

CAPACITOR CHARGING SUPPLIES FOR LASERS

Spellman's rack mounted models are available for current mode operation to permit capacitor charging at a linear rate. Special models can be ordered for high power (up to 30 kW) when the capacitance is very high.

RESONANT INVERTERS FOR ION BEAM IMPLANTATION

The inherent short circuit protection characteristic of series resonant inverters is a most important advantage for ion beam implantation applications. Spellman power supplies are currently in use in medium and high power implanters, with models which include 600 W extraction supplies and acceleration supplies producing up to 180 kV and 55 mA. Custom designs up to 400 kV with multiple floating outputs can also be produced to special order.

HVD SERIES-Resistive Dividers

FEATURES ■ High Input Impedance ■ 0.5% Accuracy (Higher Accuracies Available)
■ 25 ppm Temperature Coefficient ■ Corona-free Operation

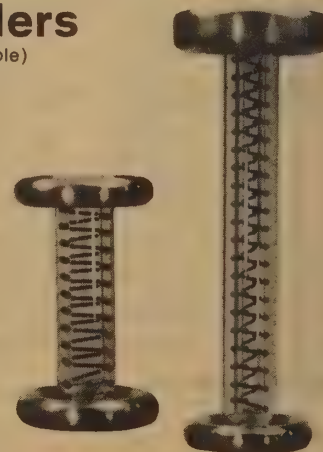

Spellman's Resistive Voltage Dividers provide laboratory or production facilities with a convenient method of measuring up to 100 kV or 200 kV with accuracy better than 0.5%. The Dividers are designed for use with standard digital and differential voltmeters.

Multilayer Printed Wiring Boards

LEADERSHIP

... through automation. AT&T's Richmond plant offers high volume manufacturing capabilities that have been recognized industry-wide. Our efficient use of CAD/CAM allows downloading of computer files directly to manufacturing. This allows us to quickly update any **MLB** design while continuing high volume manufacture. For example, we can convert new design data directly to accurate laser generated artwork. This process is remarkably fast, yet still creates highly precise artwork for production.

The benefit to you of our highly automated, computer-controlled design and manufacturing processes is a higher quality **MLB** - one more way of providing total customer support.

For additional information, contact your AT&T Account Manager, or call:

- . Buried microvias drilled to 8 mils
- . High aspect ratio drilling/plating (7:1)

If your design requirements are more complex, merely consult our applications engineers with your specifications.

AT&T's multilayer boards are UL approved. Available substrate materials include:

- . FR4
- . BT (Bismaleimide Triazine)

Various surface finishes are also available:

- . Fused Solder
- . SMOBC (Solder Mask Over

AT&T. A name synonymous with advanced technology outstanding reliability, and quality in high density multilayer printed wiring boards (MLBs) and backed by complete customer service.

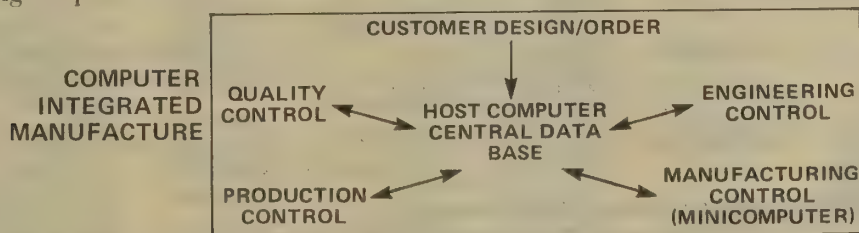

The foundation of AT&T's customer support for your MLBs is our team of applications engineers. Working closely with you from design-to-manufacture, they ensure a trouble-free introduction of your product into our automated facility. Extra effort and attention to every detail is our norm.

If you have special application requirements, AT&T supplies the resources to accommodate these needs. A separate prototype facility is available, offering fast turnaround of an MLB design by using leading-edge equipment and manufacturing techniques.

In whatever form your design information comes to us; be it digital data received over our computer network, magnetic tape, or single image artwork and a hole table; we can produce an MLB to fit your requirements.

Our extensive computer-integrated manufacturing system allows quick response to your requests for information on pricing, delivery, or job status. Owing to our highly automated production capabilities, we can also provide customized manufacturing intervals tailored to meet your turnaround requirements.

This same computer system schedules customer orders, tracks them through manufacture and ships your product as promised. We strive to ensure efficient delivery and reorder so that you receive your MLB on time to meet your marketing requirements.

Reliable. All B-G Instruments' printers use fixed-dot, thick-film thermal printheads to achieve fast, quiet operation, long life and reliable performance.

Powerful. B-G's standard DataPlot software makes it easy to print across the paper, print down the paper, and print while you plot data. Simple plotting commands produce curves, grids and bar graphs directly from the input data.

Versatile. For a moderate one-time fixed charge, any B-G printer can quickly be reprogrammed to meet the special requirements of a specific application. Custom character sets, printing stored forms with inserted data, clock/calendar functions, special calculations,

conditional operations—these are but a few of the many features that have been included in specially programmed B-G printers. In some cases, a custom-programmed B-G printer serves as the entire logic system for a fairly complex instrument.

For more information. Detailed brochures, a price list and application notes will be mailed to you as soon as we receive your inquiry. If you have an upcoming OEM application, we would be pleased to discuss it with you in detail and arrange a demonstration.

Most B-G Instruments' printer/plotters are also available with cabinets and power supplies.

Fujitsu really opened my eyes!

The Time: 9:30 A.M.

The Place: A conference room on an upper floor of Two World Trade Center.

The Situation: Lee Hales, Vice President/Operations of a telecommunications concern, stared at the nightmarish figures before him. "24% rejects on the mercury-wetted! And for the second quarter in a row!" He turned to his purchasing man and asked, "What's gone wrong with these guys?"

"We always used to get great product from them," his purchasing man explained. "but it's as though they've lost their recipe. Now—to reduce costs—they get their switches from one country and their coils from another, and nothing seems to fit."

The Solution: Hales directed him to find a new source. "Or you and I might be on the street!" Purchasing evaluated several proposals, and chose Fujitsu. As he told Hales, "They're completely vertical—every part of every mercury-wetted is made under one roof."

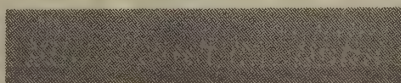

"And not just mercs," he continued, "but reeds and electro-mechanicals, too. And Fujitsu tests 100% of their product, so we don't have to!" But can they deliver 50,000 a month? asked Hales. The silent nod told him all he needed to know.

The Result: Hales not only has a new supplier, he has a new outlook. With a ready smile, he says, "Fujitsu really opened my eyes!"

The Fine Print: The identities of our clients have been changed.

The Bottom Line: Completely disciplined manufacturing is just one facet of everything that goes into Fujitsu components. Design excellence is another. But, you'd expect that from a subsidiary of a \$5 billion worldwide manufacturer of telecommunications, computers and semiconductors. To learn more about Fujitsu components, and what they can mean to *your* products, write Fujitsu Components of America, Inc., 3320 Scott Boulevard, Santa Clara, CA 95054 or call (408) 727-1700. We'll really open your eyes, too.

**Spec us just once. We'll become
your best supplier.**

Magnetic Shield Manufacturing

REPRODUCIBLE QUALITY — ON COMMAND!

COMPETITIVE EDGE

Eagle Magnetic's willingness to invest in expandable state-of-the-art automated manufacturing and control equipment reflects our desire to continue our competitive edge, serving our customers, well into the future.

CAD/CAE to CAM

Productivity begins with our sophisticated Computer process control center. Here advanced high-level programming, link design/engineering specifications to optimum machine operation. Precise monitoring compounds value added by increased machine uptime, reduced waste, and repeatable accuracy in reproducing your exact design specifications —now— or a year from now.

MORE THAN AUTOMATION

CNC/DNC and NC machines provide the precision and long term repeatability required to produce the consistent, high quality—value added products you deserve.

In addition to automated equipment, our up-rated semi-automatic and operator directed machines provide important alternatives for selecting the most cost-effective process methods.

CRAFTSMENSHIP

Talented craftsmen combine knowledge and experience, with proven

CAM and up-to-the-minute fabrication techniques.

Pride of workmanship and a creative environment, result in quick, practical solutions to production problems.

You will benefit from our improved process consistency and greater productivity.

BENCHMARK QUALITY

Eagle Magnetic Benchmark Quality is our manufacturing standard. We believe value added quality is a **design-in** feature not an inspect-in incident. Skillful management of committed individuals operating state-of-the-art CAD/CAE/CAM equipment increase **design-in** value added quality with each process.

Quality begins when design specifications are CAD/CAE enhanced and continue through master programming, down-loading, and station process control.

Careful handling and shipping insures that you receive a high quality value added product.

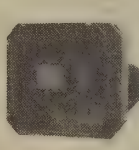

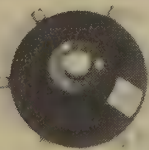

RESPONSIVE

If you expect high quality, value added shield products, manufactured to your exacting specifications, by the latest automated technology, then you should contact Eagle Magnetic Co.—the technology leader in the material selection and production of shields to solve EMI problems.

Three simple rules for static control

To protect your static-sensitive devices and profits... 1) handle all devices at static-safe work stations, 2) transport them in static-shielding containers, 3) make certain your suppliers follow rules 1 & 2.

3M offers a full line of static protection products.

But total control involves more than products. Contact a 3M Static Analyst to analyze your specific static problems, provide employee education and full technical support.

Surface Mounted Component Rework & Replacement

The SURMOUNT System has been designed to rework and repair SMD boards of Type I, II and III. This primarily robotic system is available with heads for all standard and custom SMDs and is equipped with a precision X-Y table capable of accepting PCBs up to 10 x 15". Z axis travel is 4" allowing easy access

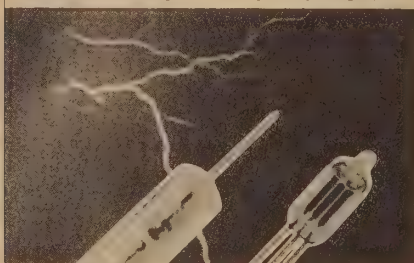

to and viewing of the work area. This table top unit comes with an electronic temperature controller with a digital LCD and featuring user selectable temperatures, preheater time, dwell time and cool-down time. Another feature is a preheater directing a hot air stream to the bottom of the PCB in a confined area associated with the component to be removed/replaced. SURMOUNT is a complete rework or limited assembly station for all Surface Mounted Technology. Request our free data sheet.

CLEAN UP...

with our new sealed
tiny toggle, rocker
and pushbutton
switches.

No contamination worries here. Cleaning and processing won't touch our new DIP compatible miniature switches. They're completely sealed. No special steps. Just solder and clean. Sweep up our options too: Multiple switching functions. Five termination styles. And three contact materials. And welded housing construction with epoxy terminal seals and internal actuator seals are standard.

Ratings from dry circuit to 3 amps at 120 V AC or 28 V DC.

Call or write today for literature and a free sample.

CONTROLLED HEATING

... where it counts

THERMO-PROBE

Heat any integrated circuit or electronic component to its rated temperature with a heat probe. Accuracy $\pm 2^\circ\text{C}$ or better. Or check the component's temperature with a thermo-couple probe. Model 810 Thermo-Probe does both. Reads out directly in $^\circ\text{C}$ and $^\circ\text{F}$ on a large $4\frac{1}{2}$ -inch meter.

EVERYTHING YOU ALWAYS WANTED TO KNOW ABOUT THERMISTORS

Thermometrics, Inc. announces the publication of its new 200 page Thermistor Sensor Handbook. A perfect companion for General Catalog No. 182, the handbook is the most comprehensive guide ever published on the design and selection of protective housings and mounts for virtually any application involving negative temperature coefficient thermistors. Design and application engineers, technicians and purchasing agents will all find it an invaluable source for specifying their sensor needs.

The Sensor Handbook's format not only presents a wide range of the most commonly used protective housings and mounts, but also provides valuable technical data on the materials and configurations of these assemblies. Measurement or Control of the temperature related parameters on almost any substance or process is now made possible by a cross reference of the handbook with the Thermistor Selection Guide which is included.

"Everything You Always Wanted to Know about Thermistors" is now answered for you in Thermometrics' Thermistor Sensor Handbook and Thermistor Catalog No. 182. Call or write us today for your free copies.

JAMES F. BERÉ
1985 National Chairman
U.S. Savings Bonds
Volunteer Committee

Savings Bonds help you as well as your country.

Because U.S. Savings Bonds help your country grow right along with your savings, the 1985 campaign to increase participation in the Payroll Savings Plan is more important than ever.

That's why National Committee Chairman James F. Beré of Borg-Warner Corporation, Treasury Secretary James A. Baker, III and the members of the U.S. Savings Bonds Volunteer Committee are proud to be leading this year's campaign.

Their knowledge, enthusiasm and leadership abilities insure you all the help you'll need to start a successful Payroll Savings Plan for your organization. And if your company already has a plan in place, they can help you find ways to increase participation.

Savings Bonds are the most widely held security in America because security is what they're all about. Savings Bonds provide market-based interest rates supported by a can't lose minimum return level.

Join us and celebrate America. For more information, contact the industry or geographic volunteer listed below. Or call the U.S. Treasury Department Savings Bond representative nearest you.

Entran's 10-32 miniature pressure transducer.

(We made it small because it makes sense.)

We call it our EPX-10. And it's tough because it's small. Figure it out.

Small means less measuring surface to bear loads. Small means compact solid state density with no moving parts.

Small means easy to handle. You can screw our 1032 UNF thread just about anywhere—and usually interface it directly with scopes, recorders and milliammeters.

Small means insensitive to acceleration, vibration and shock—so you get flat readings—static and dynamic—in the 5 to 5,000 psi ranges clear out to as high as 90 KHz.

Doesn't small make sense?
